The rainstorm occurred in the Northern Territory of Australia on January 24, 2023. The rain was so heavy that it caused flooding in several areas. The flooding washed away roads and bridges, and it also caused the Daly River to overflow its banks.

The Daly River is home to a large population of crocodiles. When the river overflowed its banks, the crocodiles were swept away by the floodwaters. The crocodiles were then carried into the ocean by the strong currents.

The crocodiles were later found in various locations along the coast of the Northern Territory. Some of the crocodiles were found on beaches, while others were found in estuaries. The crocodiles ranged in size from small juveniles to large adults.

The presence of crocodiles in the ocean is a concern for swimmers and boaters. Crocodiles are known to attack humans, and they can be very dangerous. The authorities are urging people to be aware of the presence of crocodiles in the ocean and to take precautions to avoid being attacked.

The rainstorm that washed crocodiles into the ocean was a reminder of the power of nature. The rain was so heavy that it caused flooding that washed away roads and bridges. The flooding also caused the Daly River to overflow its banks, and it swept away a large number of crocodiles.

The crocodiles that were washed into the ocean were later found in various locations along the coast of the Northern Territory. The presence of crocodiles in the ocean is a concern for swimmers and boaters. The authorities are urging people to be aware of the presence of crocodiles in the ocean and to take precautions to avoid being attacked.

Here are some tips to avoid being attacked by a crocodile:

- Be aware of the presence of crocodiles in the area.
- Swim only in designated areas.
- Do not swim at night.
- Do not swim alone.
- Do not approach crocodiles.

- If you see a crocodile, leave the area immediately.

By following these tips, you can help to reduce your risk of being attacked by a crocodile.
